

JOSHUA WOLFE

SENIOR SOFTWARE ENGINEER | CLOUD & PLATFORM
ENGINEERING LEADER

Python | FastAPI | Kubernetes | Distributed Systems | Engineering
Leadership

470-512-7767 | hunterwolfej@icloud.com | LinkedIn | GitHub | Portfolio

EXECUTIVE PROFILE

Senior software engineer and engineering leader experience delivering cloud-native platforms, distributed systems, and enterprise technology solutions across AWS, Azure, GCP, and Kubernetes. Combines hands-on expertise in Python, FastAPI, application architecture, and observability with proven leadership in team development, incident command, platform reliability, and cross-functional delivery. Known for translating complex technical challenges into resilient systems, disciplined execution, and measurable operational outcomes.

LEADERSHIP & ENGINEERING IMPACT

18,000	47 MIN	5	3
Users protected through SEV-1 recovery leadership	Critical-service restoration window	Cloud engineers led and mentored	Production-style Python/FastAPI platforms delivered

CORE EXPERTISE

Software Engineering: Python, Java, TypeScript, SQL, Bash, FastAPI, REST APIs, OpenAPI, Pydantic, Pytest, WebSockets	Architecture & Delivery: Distributed systems, modular architecture, dependency injection, service layers, event-driven workflows, CI/CD, GitHub Actions
Cloud & Platforms: AWS, Azure, GCP, Kubernetes, EKS, ECS, Docker, Linux/RHEL, Terraform, CloudFormation	Reliability & Data: Prometheus, PromQL, Grafana, CloudWatch, Datadog, OpenTelemetry, RabbitMQ, SQLite, SQL Server

PROFESSIONAL EXPERIENCE

Senior Cloud Engineering Supervisor / Cloud Solutions Engineer | 2nd Watch, acquired by Ollion

Mar 2022 - Apr 2026

Senior Cloud Engineering Supervisor, Sep 2024 - Apr 2026 | Cloud Solutions Engineer, Mar 2022 - Sep 2024

- Advanced from Cloud Solutions Engineer to senior supervisor, leading five engineers supporting enterprise cloud, data, and platform services across AWS, Azure, GCP, and Kubernetes.
- Directed the design, deployment, and operation of Python/FastAPI applications and cloud-native services, partnering with software, product, architecture, and platform teams to improve availability and scalability.
- Served as Incident Commander for a 47-minute SEV-1 Kubernetes outage affecting approximately 18,000 users, coordinating response to HTTP 503 errors, API latency, elevated 5xx rates, and OOMKilled events.
- Led root-cause analysis and remediation for deployment-related memory leaks, implementing rollback controls, traffic shifting, cluster autoscaling, canary testing, synthetic monitoring, and automated rollback criteria.
- Built Grafana and Prometheus observability capabilities that strengthen service visibility, accelerated troubleshooting, and supported capacity planning for enterprise SaaS platforms.
- Automated infrastructure provisioning and platform management through Terraform, AWS CloudFormation, AWS CLI, scripting, CI/CD practices, and controlled change management.

PROFESSIONAL EXPERIENCE, CONTINUED

Help Desk Administrator | Ingalls Shipbuilding, a Division of HII

Oct 2016 - Mar 2022

- Administered enterprise Windows and Linux systems on VMware infrastructure supporting mission-critical naval shipbuilding operations, including provisioning, monitoring, troubleshooting, maintenance, and performance tuning.
- Managed Active Directory, IAM policies, CAC authentication, YubiKey MFA, patching, backups, disaster recovery, secure access, and controlled change management processes.
- Automated system-administration workflows with PowerShell and scheduled jobs, improving execution consistency and reducing repetitive manual effort.

SELECTED SOFTWARE PORTFOLIO

Aeronautics Reliability Platform | Python | FastAPI | Docker | Prometheus

Release v0.3.0

github.com/Gift3dMyndZ/Aeronautics-reliability

- Designed and delivered end-to-end reliability application modeling synthetic aeronautics operations, telemetry disruptions, event correlation, incident classification, and lifecycle workflows.
- Built REST endpoints, OpenAPI documentation, modular service layers, dependency injection, explicit lifecycle validation, bounded correlation keys, and asynchronous processing patterns.
- Created 35+ passing unit and integration tests and implemented low-cardinality Prometheus metrics covering request performance, operational events, active incidents, invalid transitions, and lifecycle latency.

Command Center | TypeScript Platform Engineering Dashboard

gift3dmyndz.github.io

- Built a production-style SPA dashboard, aggregating repository health, releases, workflow status, CI/CD telemetry, and operational metrics through GitHub APIs.
- Implemented local caching, health indicators, portfolio navigation, repository telemetry, and GitHub Pages deployment.

Labyrinth AI Engine | Real-Time AI Platform | Python | FastAPI | WebSockets

github.com/Gift3dMyndZ/labyrinth-ai-engine

- Designed and released a real-time AI platform featuring WebSockets, adaptive AI systems, modular services, event processing, relational persistence, and cloud-ready delivery patterns.
- Implemented normalized SQLite schemas, indexing, query optimization, containerized runtime patterns, readiness/liveness checks, and replicated deployment concepts.

EDUCATION & PROFESSIONAL DEVELOPMENT

M.S., Data Science University of Phoenix 3/2026	B.S., IT Administration & Management University of Phoenix 5/2019
Technical Training Kubernetes: Microservices Python for Automation SQL Server Machine Learning: Python	Recognition National Society of Leadership and Success President's Letter of Recognition
