

JOSHUA WOLFE

SENIOR CLOUD & PLATFORM ENGINEER | SYSTEM OPERATIONS | CI/CD MODERNIZATION

Remote, United States | hunterwolfej@icloud.com | [linkedin.com/in/mrjoshuawolfe](https://www.linkedin.com/in/mrjoshuawolfe) | [GitHub](https://github.com)

PROFESSIONAL SUMMARY

Senior cloud and platform engineer with 16+ years in enterprise technology and 4+ years of hands-on cloud engineering, delivery automation, Kubernetes, Infrastructure as Code, observability, and production support. Direct Azure operational experience supporting cloud resources, networking, identity, load balancers, subnets, connectivity, secrets, and application runtime issues, reinforced by deep AWS and multi-cloud delivery experience. Applies transferable CI/CD patterns across Git, YAML, Terraform, CloudFormation, validation, controlled promotion, release automation, and environment governance. Uses Python, Bash, and PowerShell to create reusable automation and combines senior incident leadership, Datadog observability, architecture participation, and an M.S. in Data Science to stand up reliable environments and contribute hands-on to cloud and AI/ML platform development.

ROLE-ALIGNED TECHNICAL SKILLS

CI/CD Modernization: Git, GitHub, YAML, CI/CD, artifact-oriented delivery, automated validation, release automation, environment approvals, controlled promotion, and Azure DevOps adoption concepts

Azure, Containers & IaC: Microsoft Azure operations, VNets, subnets, load balancers, identity and access, AWS, Docker, Kubernetes, EKS, ECS, Terraform, remote-state workflows, CloudFormation, and AWS CLI

Observability & Reliability: Datadog Synthetic Monitoring, Cloud Network Monitoring, AWS Lambda monitoring, database monitoring, Tableau reporting, CloudWatch, CloudTrail, Grafana, OpenTelemetry, logs, metrics, traces, incident response, and RCA

Automation, Integration & AI: Python, PowerShell, Bash, Java, FastAPI, REST APIs, WebSockets, ServiceNow Scripted REST APIs, Jira, JSON, SQL, TensorFlow/Keras, scikit-learn, ML lifecycle, and inference APIs

PROFESSIONAL EXPERIENCE

Ollion | Senior Cloud Solutions Engineer Supervisor

Sep 2024 - Apr 2026

- Led and mentored five Cloud Solution Engineers supporting enterprise SaaS, cloud, and data environments across AWS, Azure, and GCP; used analytics dashboards and operational metrics to evaluate service delivery, workload health, and team performance.
- Directed high-priority incident response and Root Cause Analysis across application, infrastructure, networking, identity, and runtime layers, coordinating technical owners through restoration and corrective actions.
- Defined reusable operating practices, escalation paths, monitoring standards, and technical documentation to improve consistency across engineers and customer environments.
- Partnered with engineering, operations, data, security, and business stakeholders on cloud platform design discussions, technical investigations, implementation planning, and delivery priorities.

2nd Watch / Ollion | Cloud Solutions Engineer

Mar 2022 - Sep 2024

- Supported production Azure and AWS platforms for enterprise clients, resolving issues involving cloud resources, VNets, subnets, load balancers, identity, connectivity, secrets, Linux, containers, deployments, and application runtimes.
- Operated Kubernetes and container platforms using Docker, EKS, ECS, and YAML manifests; created and maintained Deployments and Services and diagnosed failures through pod status, events, and container logs.
- Applied Git-based delivery patterns with Terraform and CloudFormation to create cloud resources, check deployment status, validate infrastructure changes, deploy updates, and troubleshoot controlled environment changes.
- Built Terraform-driven patching and data-pipeline workflows that automated audit, patch, test, validation, job-status reporting, and controlled promotion across development, non-production, and production.
- Implemented Datadog Synthetic Monitoring, Cloud Network Monitoring, serverless and database monitoring, and Tableau reporting for IaC jobs; correlated alerts, logs, metrics, traces, network behavior, and deployment history during incident investigation.
- Used CloudWatch, CloudTrail, Grafana, OpenTelemetry, ServiceNow, dashboards, alerts, and synthetic URL monitoring to strengthen service visibility and reduce noisy monitoring through alert refinement.

Ingalls Shipbuilding, a Division of HII | Help Desk Administrator

Oct 2016 - Mar 2022

- Managed enterprise Windows, Linux, VMware, Active Directory, IAM, CAC authentication, and YubiKey multifactor authentication in a controlled, mission-critical environment.
- Executed patching, backup, disaster recovery, monitoring, troubleshooting, and governed change management across enterprise systems.
- Automated repeatable administrative activities with PowerShell and documented standardized procedures to improve consistency, auditability, and support handoffs.

Verizon Wireless Communications | Customer Support Supervisor

May 2012 - Jun 2015

- Led customer support operations, coached team members, managed escalations, and reinforced service quality and performance standards. Earlier roles included Senior Customer Service Representative and Customer Service Representative.

SELECTED PLATFORM, AUTOMATION & AI PROJECTS

Platform Engineering Command Center | *React, TypeScript, GitHub APIs & Render | Independent Project 2026*

- Designed and delivered a live executive engineering command center using React, TypeScript, React Router, TanStack Query, GitHub REST APIs, GitHub Actions, and Render, with automated quality gates and versioned releases.
- Built live GitHub telemetry, repository health intelligence, reusable case-study routing, executive animated invaders, a responsive neural activity HUD, reduced-motion accessibility, mobile safeguards, and production sharing architecture.

Labyrinth of Tartarus | *Independent Platform & AI Engineering Project 2026*

- Designed and delivered an adaptive AI simulation engine using Python, FastAPI, WebSockets, SQLite, and a browser-based interface, owning architecture, implementation, deployment, operability, and release improvements end to end.
- Implemented automated mobile testing, performance optimization, real-time WebSocket adaptation, mobile touch controls, and production-oriented runtime diagnostics for a live inference-driven application.

Machine Learning & Data Engineering Portfolio | *Independent Projects 2024 - 2026*

- Built end-to-end projects spanning machine learning, NLP, forecasting, ETL, analytics, and AI application development using Python, TensorFlow/Keras, scikit-learn, Pandas, SQL, Spark, and AWS Glue concepts.
- Applied model training, versioned source control, evaluation, API integration, monitoring considerations, and deployment-oriented engineering across LSTM and predictive modeling projects.

ARCHITECTURE, STANDARDS & LEADERSHIP

- Participates in architecture modeling, design reviews, technical investigations, and implementation planning while remaining hands-on with cloud automation, integrations, troubleshooting, and development.
- Translates recurring operational problems into reusable scripts, YAML patterns, Terraform workflows, runbooks, dashboards, alerting standards, and environment controls that can accelerate Azure DevOps adoption.
- Mentors engineers, communicates across engineering, operations, data, security, and business teams, and contributes production evidence to technical standards, platform priorities, and engineering roadmap discussions.

EDUCATION & PROFESSIONAL DEVELOPMENT

University of Phoenix | **Master of Science, Data Science** May 2026

University of Phoenix | **Bachelor of Science, IT Administration & Management** May 2019

TECHNOLOGY

Cloud Operations: Microsoft Azure, VNets, subnets, load balancers, identity, AWS, GCP, AWS Amplify | CI/CD Adoption: Git, GitHub, YAML, CI/CD, validation, release automation, approvals, controlled promotion, Azure DevOps concepts | Containers & IaC: Kubernetes, Docker, EKS, ECS, Terraform, remote-state workflows, CloudFormation, Helm and GitOps concepts | Observability: Datadog, CloudWatch, CloudTrail, Grafana, OpenTelemetry, Tableau, APM | Automation & Integration: Python, PowerShell, Bash, Java, FastAPI, REST APIs, WebSockets, ServiceNow, Jira, SQL, Linux, RHEL | AI & Data: TensorFlow/Keras, scikit-learn, Pandas, Spark, AWS Glue, data pipelines, ML lifecycle and inference APIs
